

To whom it may concern,

As an association of manufacturers', we directly see the challenges our industry has when trying to implement new technology, grow their staff and update their systems and facilities to become more competitive. The current opportunities available to our advanced manufacturers', works directly toward overcoming these challenges and we are honoured to express our support to a local Cobourg manufacturer - Activation Products and their request to upgrade to a higher level of GMP.

Activation Products has been an active member in the NMA for 2 years and we've watched them over the years grow by leaps and bounds. Their success is due to reinvesting their earnings in facilities, innovation and people. Our industry in Northumberland have been very diligent in finding new markets for their products, prototyping for new products, and overall expansion of their main core business. Activation Products has been a leader in all these areas.

We fully support Activation Products and their mission to become GMP upgraded. With this upgrade, it will ensure the hiring of 10 new positions and will add 3 new pharmaceutical production lines and the launch of 6 new products - WOW!

An innovative leader in every sense, we are proud of Activation Products and support their quest of growth, efficiencies and implementation of products.
